Overcoming Barriers in Digital Agroecology: Survey Insights and Key Takeaways from PATH2DEA's Local Workshops

REFOREST

Dr. Evelyn Reinmuth, University of Hohenheim
on behalf of the Path2Dea project team |
Path2Dea Webinar Series | 15/042025

PATH2DEA is co-funded by the European Union (Grant no. 101060789) and the Swiss State Secretariat for Education, Research and Innovation (SERI) (Grant no. 22.00535). Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union, European Research Executive Agency (REA) or Swiss State Secretariat for Education, Research and Innovation (SERI). Neither the European Union nor any other granting authority can be held responsible for them.

A multi-stakeholder perspective on the use of digital technologies in European organic and agroecological farming systems

Cynthia Giagnocavo^{a,b,*}, Mónica Duque-Acevedo^b, Eduardo Terán-Yépez^{b,q}, Joelle Herforth-Rahmé^c, Emeline Defossez^d, Stefano Carlesi^e, Stephanie Delalieux^f, Vasileios Gkisakis^g, Aliz Márton^h, Diana Molina-Delgadoⁱ, José Carlos Moreno^j, Ana G. Ramirez-Santos^k, Evelyn Reinmuth^l, Gladys Sánchez^m, Iria Sotoⁿ, Tom Van Nieuwenhove^o, Iride Volpi^p

- Survey results based on 533 completed surveys
- Geographical distribution: Austria, Belgium, France, Germany, Greece, Hungary, Italy, Spain, Slovakia, Switzerland

Source: Path2Dea publication

Highlights

- Perceptions of digitalisation benefits and barriers vary among stakeholder types
- Main barriers for use of technologies are cost, complexity and lack of adaptation
- Lack of awareness of the technologies is the main reason why farmers do not use them
- Stakeholders have greater agreement on the drivers of digitalisation in agroecology
- Stakeholder networks and government support are main drivers of digitalisation

Results from co-creation workshops with Path2Dea Showcases

The preferred characteristics of the tools relate to performance aspects such as durability and reliability, but also to the simplicity of the tools.

But also tools to improve farm planning and marketing of products.

Most of the barriers are shared between the different showcases

Results from co-creation workshops with Path2Dea Showcases

Background:

While drivers are very case-specific, barriers are more clear and seem to be more agreed on...

Status quo:

Most tools are not suitable and do not provide enough added value (**inaccuracy, complexity**) combined with a lack of infrastructure (**Internet access, compatibility and data security concerns**). As a result, tools do not necessarily work together or are used based on their capabilities. Data is collected for individual farm solutions and manual analysis.

Understanding the needs of agroecological farming operations

Background of our showcases:

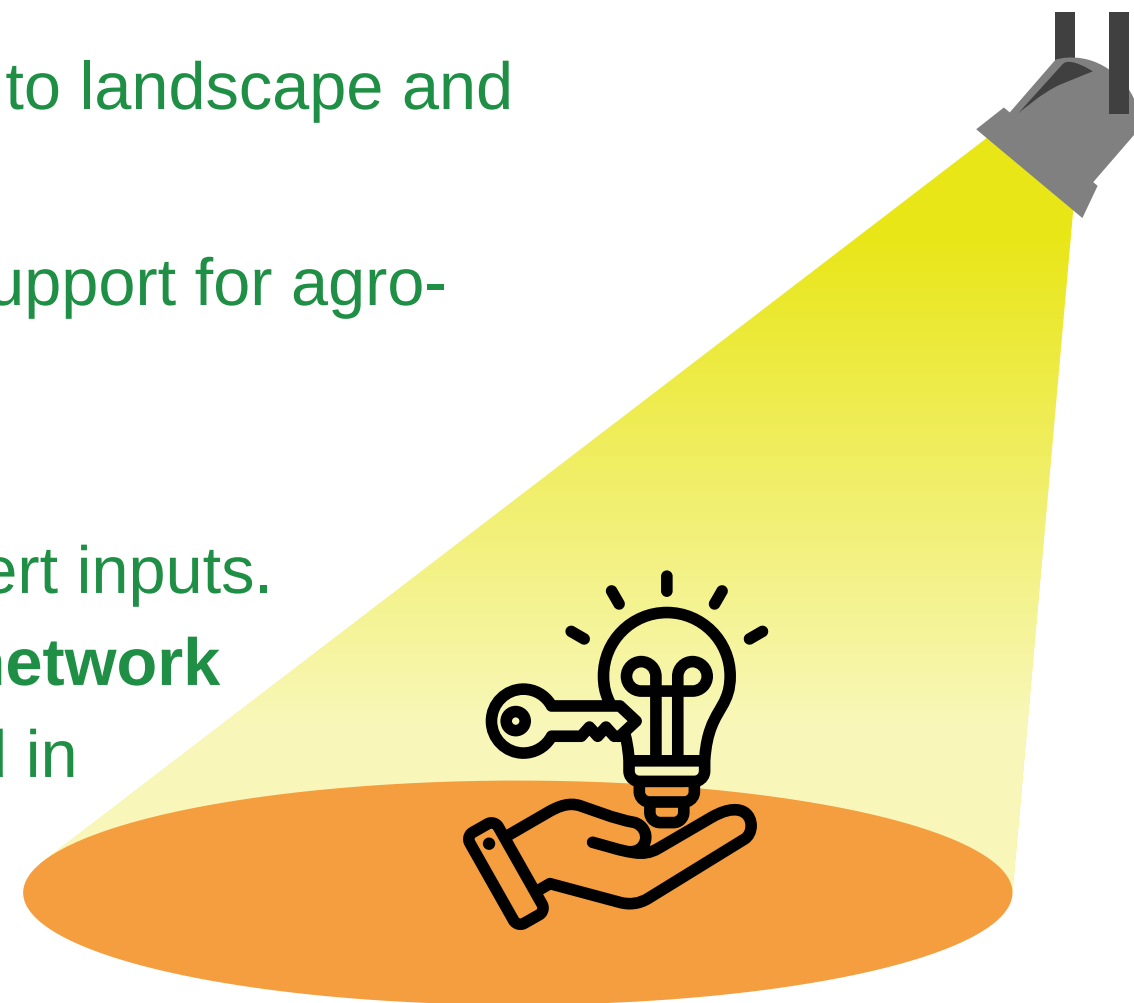

- Small farms in rural areas with limited infrastructure and very specific farming conditions
- Often cooperation of small farms under the umbrella of large cooperatives
- Low level of standardisation
- Many farmers over 50 years old with low digital literacy
- Place-based decision-making required due to farm characteristics, from size to landscape and climatic conditions
- Data collection based on own expertise in terms of relevance and decision support for agro-ecological farming practice

Status quo Path2Dea Showcases

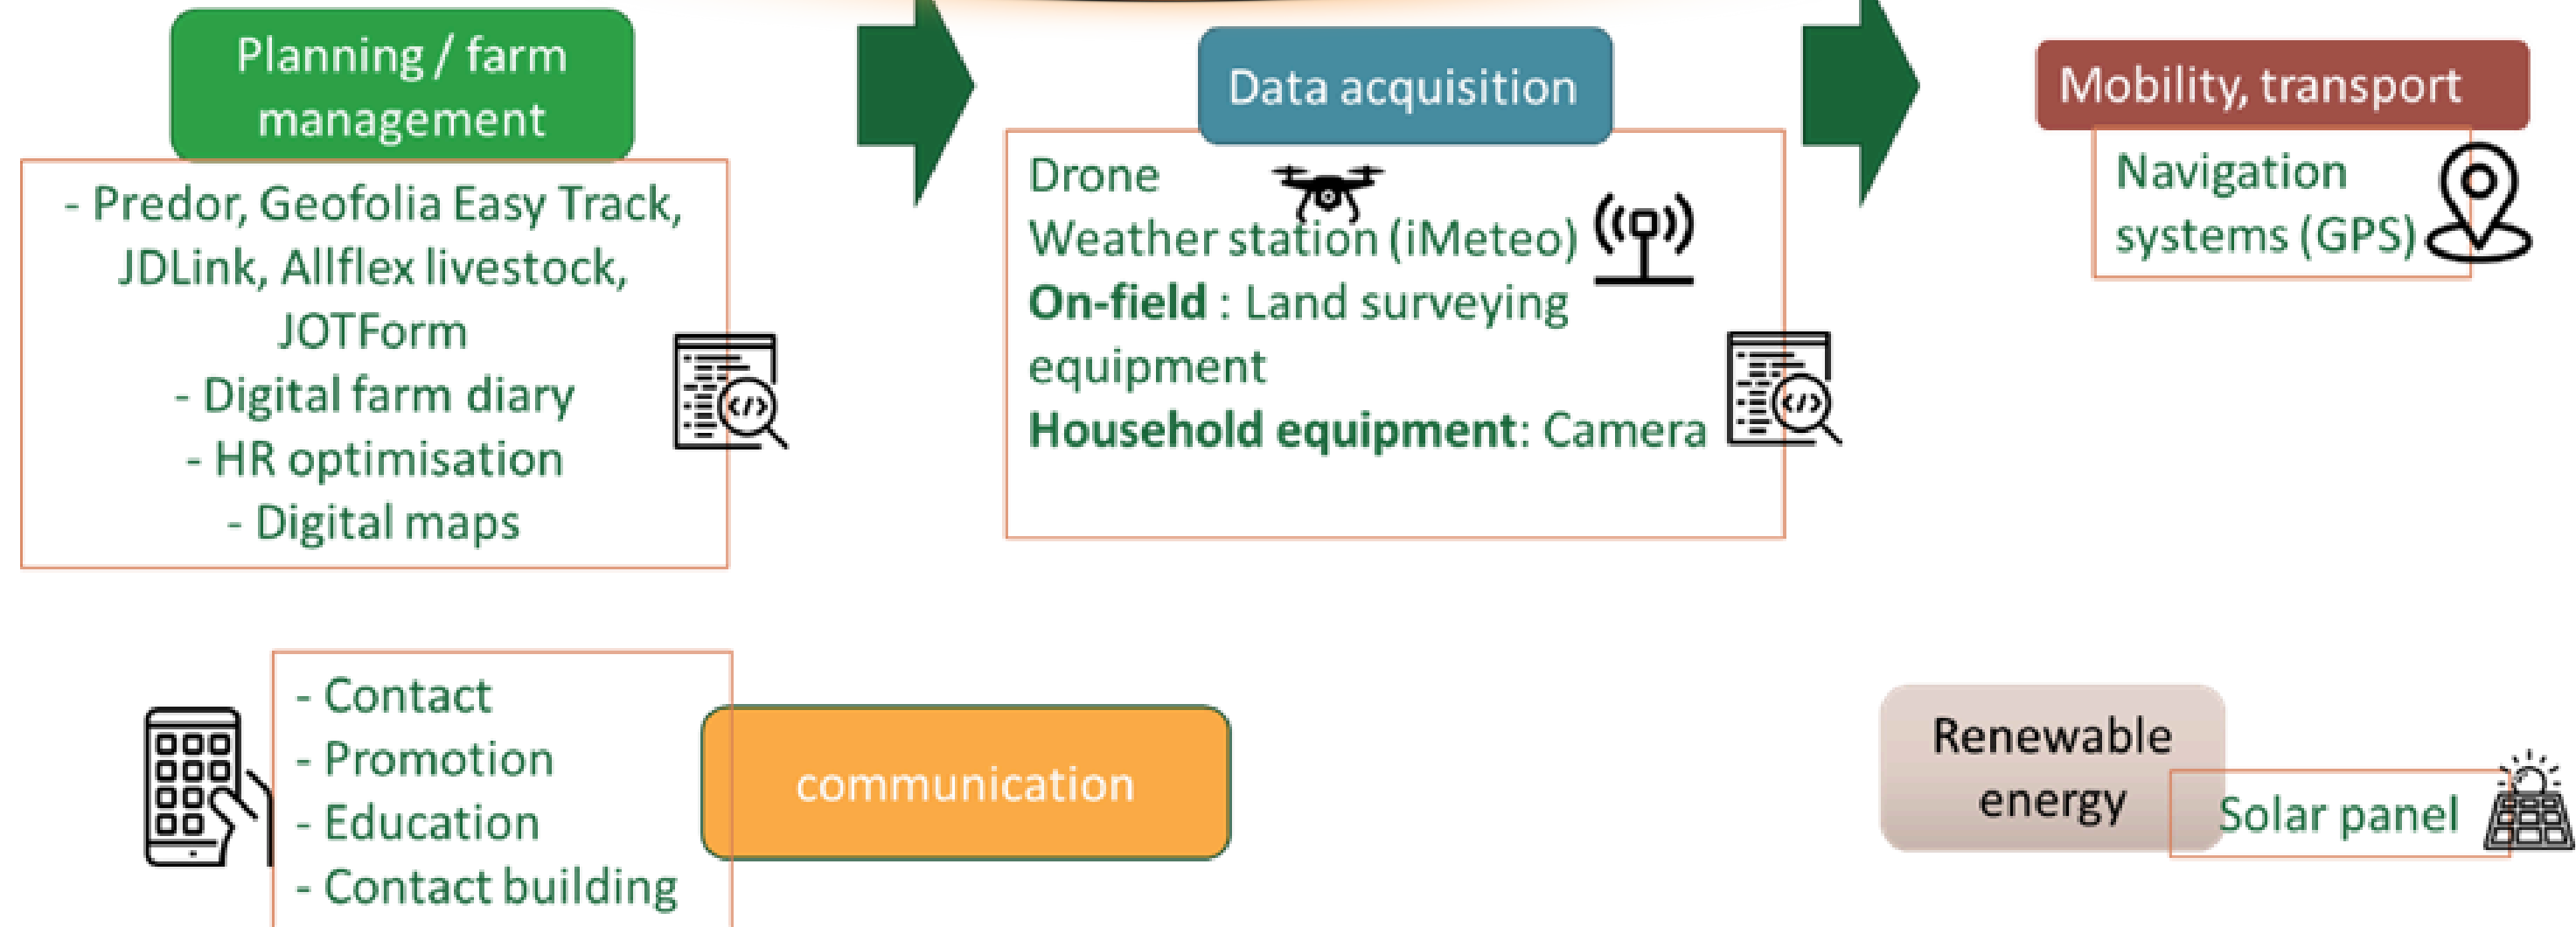

A set of tools not adapted to agroecology, manually integrating site-adapted expert inputs.

- Decision support based on a **combination of** (self-developed) **tools** and a **network of experts** (advisors + peers) for a specific farming focus, (partly) embedded in **challenging landscapes or climatic conditions** (challenging in terms of standardisation).

Path2Dea Showcase

- apps to register practices (synapse, conselio, terciel, GRC)
- banking & treasury management apps
- market prices tracking (agritel, euronext)
- apps for sales contracts managing
- Agricultural machinery : rental, managing, booking (Karnott, MyCuma)

Planning / farm management

- herd management apps (pilotelevage)
- milking robot data visualization
- weather forecast checking websites (meteogo, meteociel)
- DSS for fertilizer & phyto use (fongi pro, Fertilio sat, Fertilio ERM)

- trigger irrigation and fault detection
- warning fuel level

Data acquisition

Sensors : environment

Sensors : Herd/animal remote controlling

Production

- auto guidance (Trimble)
- dose modulation (Vicon, JD)

- X, WhatsApp, Teams, e-mails
- apps to share data with advisor and communicate (Conselio)

communication

- connected weather station (Sencrop, Weenat)
- capacitive electrode
- temperature sensor

- calving sensing
- camera connected to smartphone for real-time monitoring

- milking robot monitoring (DELAVAL, LELY)

Renewable Energy

- solar panels production monitoring (I solar Cloud)

Critical components of designing and developing digital tools

Functional requirements

Define what the system should do in relation to a specific farming activity (irrigation, fertilisation, pest control, herd management, etc.), such as measure, monitor, control, etc.

Non-functional requirements

Define how the system should perform, e.g. it should be easy to use, easy to maintain, provide a good user experience, scalability, etc.

Critical components of designing and developing digital tools

Functional requirements

Non-functional requirements

Define what the system should do in relation to a specific farming activity, such as measure, monitor, control, etc.

Focus on features and functionalities

Define how the system should perform, e.g. it should be easy to use, easy to maintain, provide a good user experience, etc.

Focus on quality attributes

**P1,2,3,4,
5,6,7**

Improve resource efficiency + strengthen resilience (HPLÉ, 2019)

**P8,9,10,11,
12,13**

Secure social equity/responsibility (HPLÉ, 2019)

The way forward

Functional requirements

Focus on features and functionalities

Adapt to specific production systems, e.g. by using EU networks: Use frameworks such as the European Network of Agroecology Living Labs to standardise metrics and share best practices.

Overcoming barriers for tool developers

Provide more opportunities for innovative companies, especially start-ups, to test their solutions, especially in the early stages of development. Building farmers' confidence in digital tools provided by start-up companies.

Non-functional requirements

Focus on quality attributes

Co-create the tools with the farmers, split the tools into the robust operational units and the complex background expert systems, improve the maintainability, interoperability follows suitability.

Collaboration with statistical services of the EU to establish open repository for AgroEcol data for calibration of tools.
